

Information For Dr. Momtazi's Skin Lesion/Cancer Patients

This page is designed to provide an overview of your skin cancer treatment.

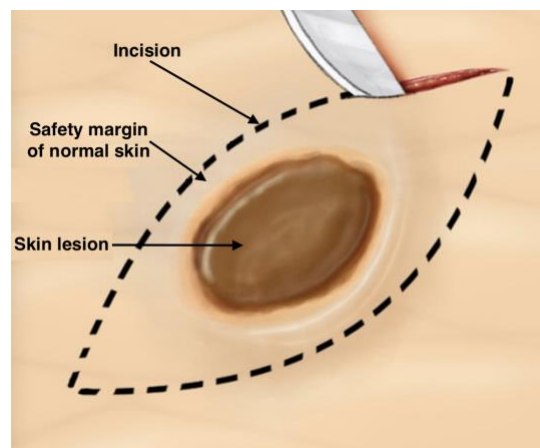

Overview

- Skin cancer is an abnormal growth of cells in the skin
- Common types include basal cell carcinoma (BCC), squamous cell carcinoma (SCC) and melanoma
- Skin cancer excision is a treatment to remove these abnormal cells from your skin
- Most cases of these types of skin cancer can be cured if they are found and removed early
- If the skin cancer is not completely removed it can come back
- After your skin cancer is removed you will have a scar, which will fade with time

Skin Lesion/Cancer Excision

- You do not need to fast before your procedure
- During your procedure, Dr. Momtazi will use local anesthetic to numb the area around your skin cancer

- Dr. Momtazi will then remove the skin lesion with a safety margin of normal skin around it
- The safety margin of normal skin depends on the type of skin lesion or skin cancer
- Dr. Momtazi will confirm the safety margin of normal skin with you
- All of the skin that is removed is sent to a lab where it is looked at under a microscope by a specialist
- This is done to confirm the diagnosis and/or that all of the skin cancer has been removed

- These results take two weeks and you will be contacted once they are completed
- Dr. Momtazi will close the area using stitches and will confirm if and when your stitches need to be removed
- The procedure takes about 30-45 minutes and you will go home afterwards
- Dr. Momtazi will provide you with comprehensive postoperative instructions to take home with you
- These instructions are designed to help you care for your reconstruction and obtain the best possible results
- It is safe to drive yourself home after your procedure

Complications

- Common complications with this procedure include bleeding, infection and problems with wound healing

Follow Up

- Dr. Momtazi will see you in follow up 1 or 2 weeks after your procedure; he will confirm this with you
- Follow up care is a key part of your skin cancer treatment and safety
- Be sure to come to all of your appointments and to call Dr. Momtazi's office if you are having any problems

Questions

- If you have any questions about your skin cancer treatment, please call our office (613) 737-8899 ext. 73480

Postoperative Instructions For Dr. Momtazi's Skin Lesion/Cancer Patients

Your skin cancer procedure is booked for _____

These instructions are designed to help you care for your reconstruction and obtain the best possible results.

Dressings

- Two days after your procedure, remove all your dressings (all tape and gauze)

Showers

- Gently wash all of your skin including the area where you had your procedure daily using mild soap and water
- Any soap is ok, but avoid fragrances
- Do not avoid washing the area where you had surgery; it is safe to do so
- Do not use alcohol or peroxide to clean your skin
- After washing, pat the area dry and leave open to air
- If you wish to cover the area, you may reapply a light gauze dressing
- Do not apply creams, moisturizers, oils, or other products on or near where you had your procedure

Pain

- Pain to the area where you had your procedure is normal and expected
- This pain should improve over several days
- For pain relief, take Tylenol (acetaminophen) and Advil (ibuprofen) together (unless otherwise directed)

Activity

- No strenuous activity (nothing that will increase your blood pressure) for 2-4 weeks
- No lifting greater than 5 pounds for 2-4 weeks
- Activities such as showering, cooking and moving around your home are ok

Follow up

- Dr. Momtazi will see you in follow up on _____
